Moodle Mobile Setup

1. On your device, navigate to the store. (Android → Google Play Store; Apple iOS → App Store).

2. Search for Moodle Mobile. (Please note that there are a variety of Moodle apps made by 3rd parties that will not work with our site. You’re looking for the app made by Moodle. It should list “Moodle Pty. Ltd.” as the owner/developer.

3. On an Android device, click install to begin the download. On an iOS device, click get.

4. Accept the terms and conditions. Depending on your settings, you may also need to enter your device password.

5. Open the app.

6. When asked for the site address, type moodle.millikin.edu

7. Click connect.

8. Enter your user name (do NOT include the @millikin.edu part) and password.

9. Click login.

That’s it – you should see your courses begin to load!

A Few Words of Advice:

- Because this app uses your myMILLIKIN username and password, when you update your password, you’ll also need to re-enter your credentials in the app.

- If you are a student doing a Moodle activity with controlled access (such as a quiz/test/exam), you cannot change devices in the middle of the activity. In other words, if you start a quiz on your phone, you must finish it on your phone – switching to your laptop midway through the quiz will generate an invalid session key, and you will not be able to complete and submit your work.
